

Planning Application and EIA

NorthConnect are in the process of completing an Environmental Impact Assessment (EIA) to support the planning application for:

- ❑ **The Interconnector Converter Station including services, auxillary buildings and parking.**
- ❑ **The High Voltage Alternating Current (HVAC) cables from the Interconnector Converter Station to the boundary of Scottish Hydro Electric Transmission Ltd's (SHE - Transmission) land; where the substation connection will be made.**
- ❑ **Temporary construction requirements.**

This consultation process is specific to the scope of the planning application. A further planning application will be submitted for the High Voltage Direct Current (HVDC) cables which will link the Interconnector Converter Station in the UK to the Interconnector Converter Station in Norway. An EIA will be completed for the HVDC cables and NorthConnect will consult on the HVDC cables in due course.
